

Digitizing the Supply Chain | Supply Chain 360

Supply chain organizations across all industries thrive on insights - they drive everything from KPI structure to audit reporting accuracy. But when organizations can't see disruptions coming due to fractured and disconnected information, how can proactive decisions be made? They can't.

Today more than ever organizations are flooded with an unprecedented amount of disparate information from various sources, all of which generate reports that can provide leaders with transparent insights into global supply chain network logistics and operational efficiencies. The bad news is that someone needs to make sense of this tsunami... without drowning.

SUPPLY CHAIN 360

Gartner research reveals that 38% of supply chain leaders are concerned that their supply chains are not well positioned to handle the challenges of the next two years.² Digitizing the supply chain entails establishing the right information and analytic disciplines to address challenges like error-filled order entry, delayed inventory allocation, inaccurate invoicing, or lack of actionable insights for business growth.

With so much content in isolated forms, many organizations don't have the ability to bring it together - that's where Paradigm steps in. Leveraging a variety of tools and processes, we take your disparate data, ensure its accuracy, and ultimately automate a dashboarding process that delineates precisely the insights that will benefit your operational goals.

Imagine being able to immediately pivot directions and solve supply chain problems rather than try to identify them.

ART OF THE POSSIBLE - HOW WE GET YOU THERE

SUCCESS STORY

- Reduced friction by 55%, saving \$5M
- 28 plants, multiple supply chain technologies, and hundreds of KPIs curated into single structure supporting 11 countries
- Identified potential accuracy issues with 14% of customers and 20% of materials
- Created actionable insights with 6 standard KPIs, providing opportunity to drill down and identify areas with largest issues
